Subject: Comment on the proposed cleanup at the Olin site

Dear Ms. Monash,

As a trainee of the MIT SRP studying the carcinogenic effect of NDMA, I have seen how toxic this carcinogen, and other nitrosoamines can be. I believe it is extremely important and urgent for a thorough cleanup, not only in the liquid DAPL but also in the non-aqueous phases including the soil, to be performed at the Olin site. In addition, testing for other potential carcinogens in addition to NDMA should be performed to ensure safety of the residents of Wilmington.

Sincerely,

Norah A. Owiti
